

For thirty years, Consultation-Liaison psychiatry is booming across Europe, with still significant disparities in training and in implementation across countries. However, this specialty is a very specific clinical and research field.

Yet C-L psychiatrists often remain alone, both locally and in international exchanges. Even if experienced psychiatrists could better deal with this solitude, debates on clinical practice, training and research with colleagues from all around the world are crucial for young psychiatrists.

The aim of this Special Interest Group is to make easier meetings and exchanges between young psychiatrists inside the EAPM.

The annual Congress of the EAPM is an opportunity to organize a symposium composed of interventions of young psychiatrists/psychologists and also to target in the program of the Congress the most interesting interventions for young colleagues.

If you are a young C-L psychiatrist or psychologist, we would be very happy to receive your proposal of intervention in this Early Career Symposium that we will submit to the Board.

Please feel free to address by mail your abstract to guillaumeairagnes@yahoo.fr

Remember! We encourage all young researchers to compete for a Travel Award and for EAPM award. See <http://www.eapm2015.com>
